

Quick Start Guide

For Armada Portable Folding Solar Kits

FOR 2021 MODELS WITH MC2420N10-HY CONTROLLERS

CONGRATULATIONS ON YOUR PURCHASE OF AN ARMADA PORTABLE FOLDING SOLAR KIT!

Follow these tips to get the most of your solar kit. Armada kits are of the highest quality and will give you many years of clean and efficient power!

THE PARTS:

Inside the box you will find the solar panel, a 20 foot extension cable, 3 different connecting cables and a Zamp port adapter.

GETTING STARTED:

Find a clear and level spot to set up the panel. Pull the 2 legs out from the back of the panel. Now pull out the 2 angle adjusters and slowly ease the panel back until the adjusters sit into one of the 4 slots. The first position will be ideal for most situations. Connect the 20' extension cable to the controller making sure that the positive and negative wires of the extension cable are lined up with the positive and negative of the controller cable. If they are not, use the other end of the extension cable to plug into the controller cable. Next, select one of the four cables/adapter to connect to your batteries. If your RV has a pre-wired Furrion or Zamp port you can use the Furrion cable or Zamp adapter to plug directly into these ports! If you do not have a pre-wired port, you can use alligator clamps to attach directly to your battery posts or eyelets that will attach to the stud of your batteries. It is recommended that you attach the cable/adapter securely to your batteries or pre-wired port first, and then connect the extension cable to the cable/adapter.

THAT'S IT! YOUR SOLAR PANEL IS NOW OPTIMALLY CHARGING AND PROTECTING YOUR BATTERIES!

You can move the panel throughout the day to maximize your exposure to the sun and increase the charge rate to your batteries. If the panel becomes dusty or dirty, wipe clean with a damp cloth. When you are ready to put the panel away, disconnect the extension cable from the controller first, then remove the connector or adapter from your batteries or pre-wired solar port. Fold up the legs back into the frame, close up the panel and put back in to the protective carrying bag!

ARMADA THANKS YOU FOR SUPPORTING CANADIAN DISTRIBUTORS AND RETAILERS!

**Product Update:

It has come to our attention that the Zamp adapter was not shipped with our most recent shipment of portable folding kits. They have since been shipped separately and we will be sending them to all dealers that received affected product. Dealers should have them on hand starting the week of June 8. Customers that received a kit without the adapter can pick one up free of charge. If you were planning on using the pre-wired Zamp or Go Power port on your RV, please wait for the proper adapter to do so. In the meantime, the eyelet and alligator clamps can be used temporarily. We sincerely apologize for any inconvenience this may have caused.
